

Alexandra Davis

Alexandra is a Geologist and Water Resource Planner for the Kansas Water Office. She works on conservation efforts primarily in western Kansas with a focus on public education and outreach initiatives.

Alexandra graduated with a B.S. in General Geology and Geography from Northwest Missouri State University in 2017. There she completed two award winning undergraduate research projects including a study on harmful algal blooms in Lake Erie. Her time at Northwest sparked her interest in environmental sustainability which she believes can be achieved through conservation efforts and public education. It is her goal to spread her love for nature and science to others and encourage our youth, particularly young women, to pursue careers in the sciences.
