

# Cimarron RAC Goals & Action Plans Discussion

June 13, 2019

# Purpose

- ❑ Discuss Timeline
- ❑ Review Goals and Action Plans
- ❑ Discuss Progress
- ❑ Discuss Feasibility
- ❑ Discuss Possible Changes
- ❑ KWO Provides Information

# Timeline

- ❑ Spring 2019: RAC Progress Report
- ❑ Late Spring-Early Summer 2019: **RACs** discuss budget & RAC goals & action plans
- ❑ Late Summer-Early Fall 2019: Public Input Meetings
- ❑ Fall 2019-Winter 2020: **RAC** provides recommendations
- ❑ Winter 2020-Summer 2020: Reorganize & incorporate Vision & KWP. **RACs** provide input to KWA on priority projects.

# Goal #1 & #2

- ❑ Reduce the rate of decline of the Ogallala Aquifer in the region through voluntary, incentivebased conservation as assessed every five years.
- ❑ Extend the usable lifetime of the Ogallala Aquifer in the region through technology adoption (irrigation, industrial, municipal, etc.), new crop varieties and conservation for all uses and for many generations.

*Goals 1 and 2 seek to reduce water use in the region therefore the following actions apply to both Goals. Goals 3 and 4 are strategies to address Goals 1 and 2.*

# Action Plans: Priority Goal #1 & #2

- ❑ Define and quantify the regional aquifer decline, establishing a baseline for comparison
- ❑ Work with partners, including KDA and NRCS, to develop baseline of water saving technologies in use and voluntary incentive based conservation occurring and a method to track participation. Consider using the annual water reporting system, producer surveys and other means to identify water saving efforts if needed.
- ❑ Secure funding, including statutory SGF transfer to SWPF, to support water conservation programs and evaluation of technologies, crop varieties and water management to save water.
- ❑ Provide water users with information on available tools and programs, including but not limited to; LEMAS, WCAs, Multi-Year Flex Accounts, Water Banks, Irrigation Scheduling, RCPP-Soil Probe program through GMDs, K-State Extension tools, K-State Research/farms and additional tools and programs as made available.

# Action Plans: Priority Goal #1 & #2

- ❑ Change producer perception from a “use it or lose it” mentality.
  - ❑ Use demonstration projects to educate producers to economically reduce water used. (Water technology farms, LEMAS, WCAs, K-State Research and Extension farm projects and other water management and water efficiency projects can provide valuable examples and information to producers to encourage their participation in water saving efforts.)
  - ❑ GMD3 and DWR work with producers to establish LEMAs and WCAs.
  - ❑ Build a network of agencies, organizations, researchers, industry and producers to disseminate credible, accurate information on water use, conservation and technology, programs and tools to reduce water use.
    - Utilize K-State and others to develop technologies and crop varieties to enhance water savings methodologies and deliver information.
    - Work with producer and farm groups to reach other producers.
- Include municipal and industrial users in outreach.

# Action Plans: Priority Goal #1 & #2

- ❑ Evaluate the effectiveness of technologies and crop varieties to develop voluntary incentives and tools to economically reduce water usage.
  - Support water technology farms (WTF) in the region for evaluation of technologies and management methods to reduce the current level of water use with a goal of at least one WTF in a water stressed area and one in a non-stressed area.
  - Develop mobile drip irrigation (MDI) statistics so funds could become available for technology upgrades through state and federal programs.
  - Work with federal partners to make additional water saving technologies eligible for federal programs.
  - Disseminate scientific and economic information on technology efficiencies and crop varieties as well as other relevant information from pilot studies, research and water technology farms.

# Action Plans: Priority Goal #1 & #2

- ❑ Use positive press releases to spread the word as WCAs are developed.
- ❑ Public water suppliers and industrial users should consider alternative uses of non-potable water and existing water supplies before developing any new water supplies.
- ❑ Public water suppliers should consider water rate structures to promote water conservation.

## Goal #3

- If individuals elect to conserve then they would be afforded flexibility (e.g. - allowing quantities to be moved, water bank movement, water conservation areas, etc.) Individuals may choose to remain with current water use but not be afforded the flexibilities.

# Action Plans: Priority Goal #3

- ❑ Increase adoption of water conservation through education by those who are currently using the technology.
- ❑ Identify existing conservation success stories and share with area producers, industry or municipalities as applicable.
- ❑ Initiate demonstration projects with willing producers in the region (technologies, crop varieties and management techniques) to reduce water use.

# Goal #4

- ❑ As measured through increase in adoption by 50% as assessed each five years, promote the adoption of irrigation efficient technology and invest in university research to evaluate the effectiveness of such technology and crop varieties to develop voluntary incentives and tools to economically reduce water usage. Recommended strategy to achieve Goal - Increase adoption through education by those who are currently using the technology.

# Action Plans: Priority Goal #4

- ❑ Educate water users on new technologies through local papers, extension, meetings of producer groups, irrigation organizations, conservation districts, GMD3 and other means.
- ❑ Develop and disseminate results from the use of water saving tools by those who have adopted technology and management tools to economically reduce water usage.
- ❑ Use local demonstrations of technology/demo farms in region to share techniques.
- ❑ Provide Water Conservation Area (WCA) information, including dissemination with water use reports.
- ❑ Develop widespread awareness of EQIP, CRP, RCPP, CIG and other program availability and increase participation.
- ❑ Encourage improvement of municipal conservation plans, municipal rate structures and other means to encourage water use reductions.

# Progress

- ❑ Regional Goal Action Plan Implementation
- ❑ RAC Action Plan Tracker

# Feasibility

- Do the Goals make sense?
- Do the Action Plans make sense?
- Are they accomplishing what they were intended to?
- Are they inline with the Vision?
- Do you agree with the progress?

# Changes? Turn and Face the Strange

- Would you make changes to the goals or actions?
- Would you delete any?
- Would you add any?

# Goal #1 & #2

- ❑ Reduce the rate of decline of the Ogallala Aquifer in the region through voluntary, incentivebased conservation as assessed every five years.
- ❑ Extend the usable lifetime of the Ogallala Aquifer in the region through technology adoption (irrigation, industrial, municipal, etc.), new crop varieties and conservation for all uses and for many generations.

*Goals 1 and 2 seek to reduce water use in the region therefore the following actions apply to both Goals. Goals 3 and 4 are strategies to address Goals 1 and 2.*

## Goal #3

- If individuals elect to conserve then they would be afforded flexibility (e.g. - allowing quantities to be moved, water bank movement, water conservation areas, etc.) Individuals may choose to remain with current water use but not be afforded the flexibilities.

## Goal #4

- ❑ As measured through increase in adoption by 50% as assessed each five years, promote the adoption of irrigation efficient technology and invest in university research to evaluate the effectiveness of such technology and crop varieties to develop voluntary incentives and tools to economically reduce water usage. Recommended strategy to achieve Goal - Increase adoption through education by those who are currently using the technology.

# Action Plans: Priority Goal #1 & #2
