Water Technology Farms Report Now Available
Data from the 2019 growing season on the KWO website

Technology and management tools keep evolving to help crop producers make every drop of water count on their fields. Water Technology Farms were developed five years ago as part of the *Long-Term Vision for the Future of Water Supply in Kansas*. They began as three-year pilot public-private partnerships to demonstrate the latest in crop irrigation technology and water conservation research on the field scale.

“I’m pleased to see the continued interest in Water Technology Farms across the state,” said Kansas Water Office Director Earl Lewis. “It is promising to see outcomes from these farms show that water use reductions, coupled with irrigation technology adoption and water management improvements are leading to positive effects on the aquifer as well as the producer’s bottom line.”

Water Technology Farms have proven valuable in helping to expand the conversation and education of producers as well as decision makers on equipment and technology utilized in agricultural water conservation efforts.

“This was our first year in the Water Technology Farm program and have four different fields with differing soils in the program and believe that each will help other farmers to look at our testing and see a field that might be similar to one they have,” said Ray Smith, Homeland Water Tech Farm producer located in Greeley County. “If we chose to we can save for the best return out of the water. If we can find four things to save five percent, that’s a total of 20 saved each year and that does make a difference.”

The 2019 Growing Season Report shares information about each of the Water Technology Farms operational in 2019 including the crop or crops grown, technology utilized to manage water application, as well as harvest data and sponsors of each location. To hear from more producers and to see the complete 2019 Growing Season Report, visit www.kwo.ks.gov

Water Technology Farms would not be possible without the support of key public-private partnerships. More than 100 companies and organizations support this effort and sponsors for each farm are on the Water Technology Farm pages on the KWO website. There is a total of 17 participating Water Technology Farms for the 2020 growing season.
