# RESERVOIR SEDIMENT MANAGEMENT

JOHN SHELLEY, PH.D., P.E.  
U.S. ARMY CORPS OF ENGINEERS  
KANSAS CITY DISTRICT

Part 1/2

US Army Corps  
of Engineers®

U.S. ARMY

## **Purpose**

**To share the good news of  
reservoir sediment management:**

**Reservoirs CAN be operated for  
long-term sustainability by  
passing the sediment  
downstream.**

**Outline**

**Why we all should care**

**Examples and Methods**

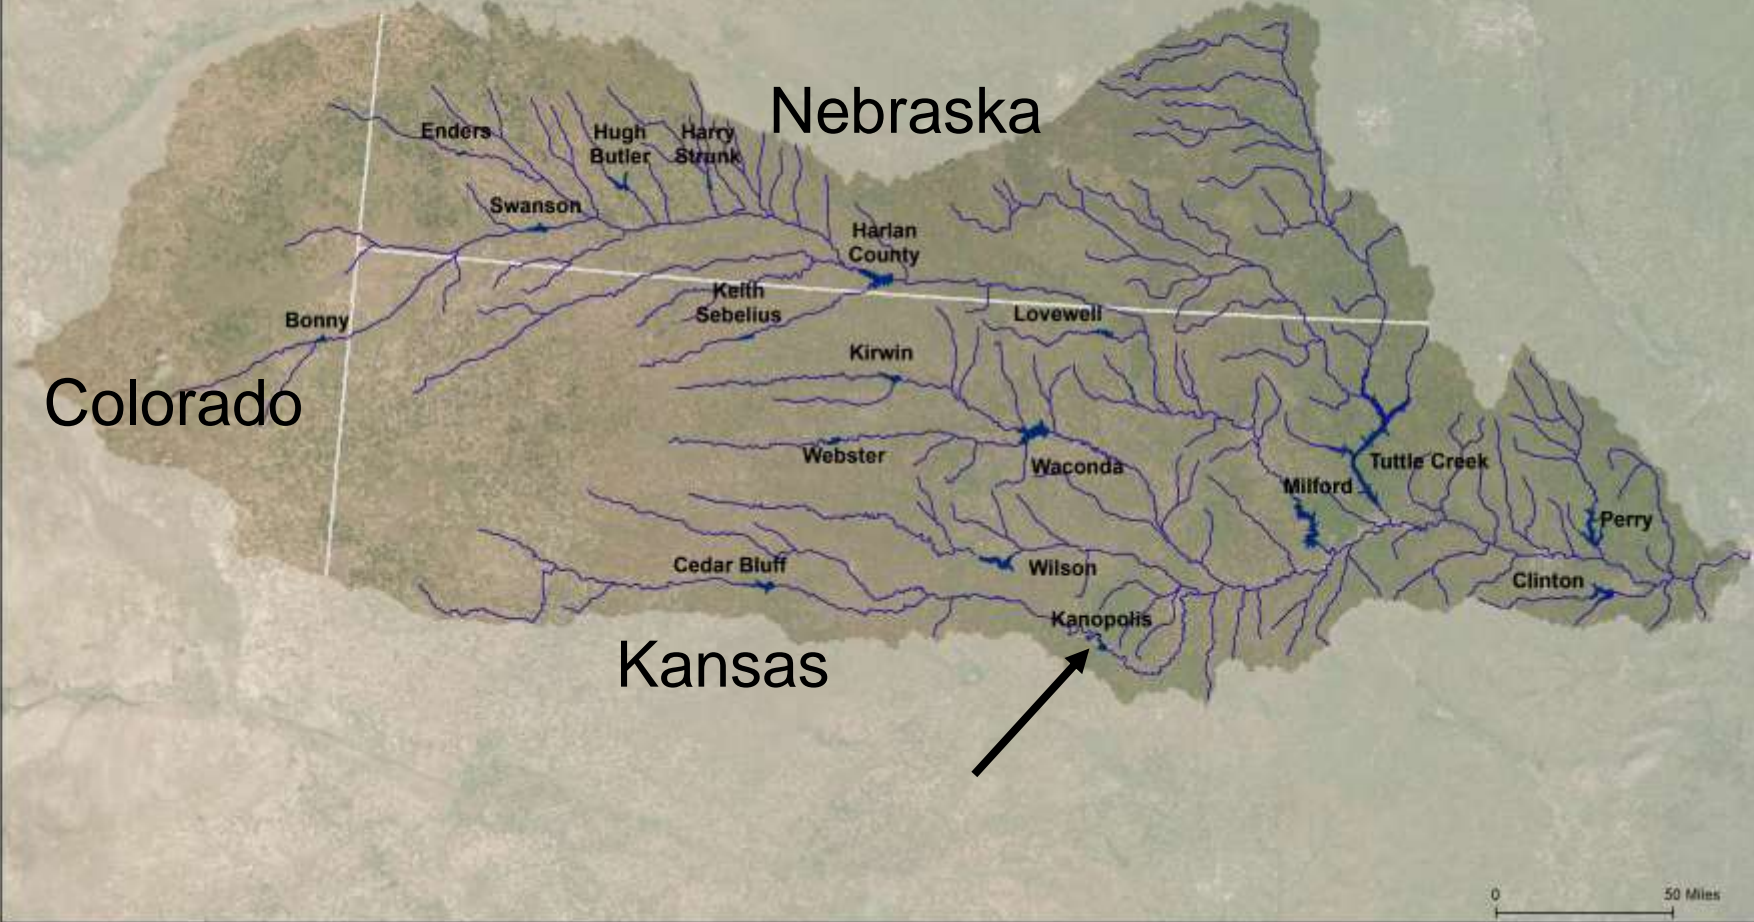

**Water Injection Dredging**

# **Why Does the Corps Care About Reservoir Sedimentation?**

**Acute problems**

**Chronic problems**

# Kanopolis Lake

# Kanopolis Lake

Multi-purpose pool 43% full of sediment

Pool raise not pursued due to dam safety concerns

---

US Army Corps of Engineers

# Kanopolis Lake

---

US Army Corps of Engineers

# Sedimentation Issues: Acute

Gate operability

2009- 19' of sediment in front of left trash rack

**Suction dredging using divers within intake tower and approach structure  
~ \$1,000,000.**

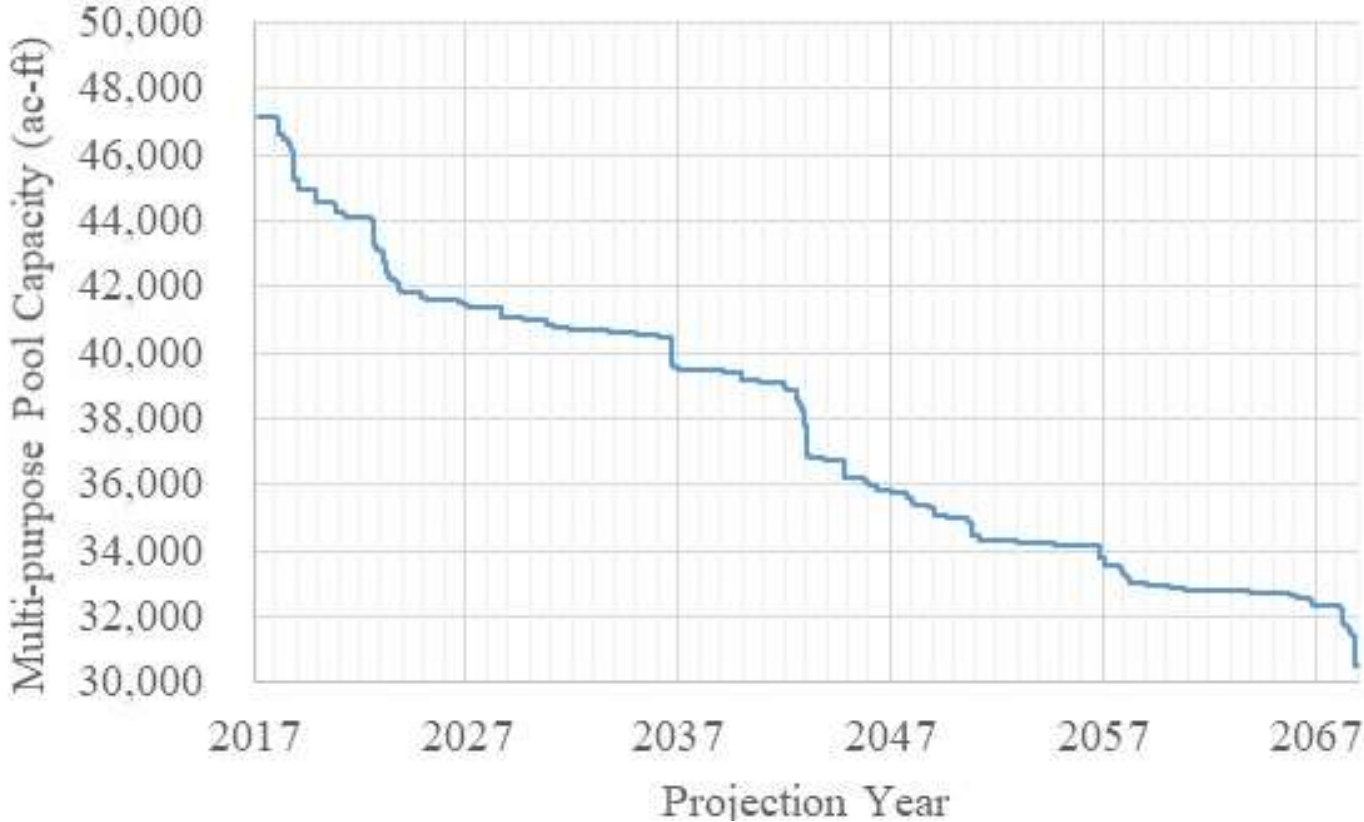

**Sediment depths, 2014 = 9', 2015 = 10', and 2018 = 14'.**

# Kanopolis- Feb 2019

# Kanopolis Lake: Prognosis

**Kanopolis Multipurpose Pool Will be 58% Full by 2067**

# Tuttle Creek Lake: 1962 - 2010

# Tuttle Creek Lake: 1962

# Tuttle Creek Lake: 2010

# Sediment Accumulation in the Multipurpose Pool

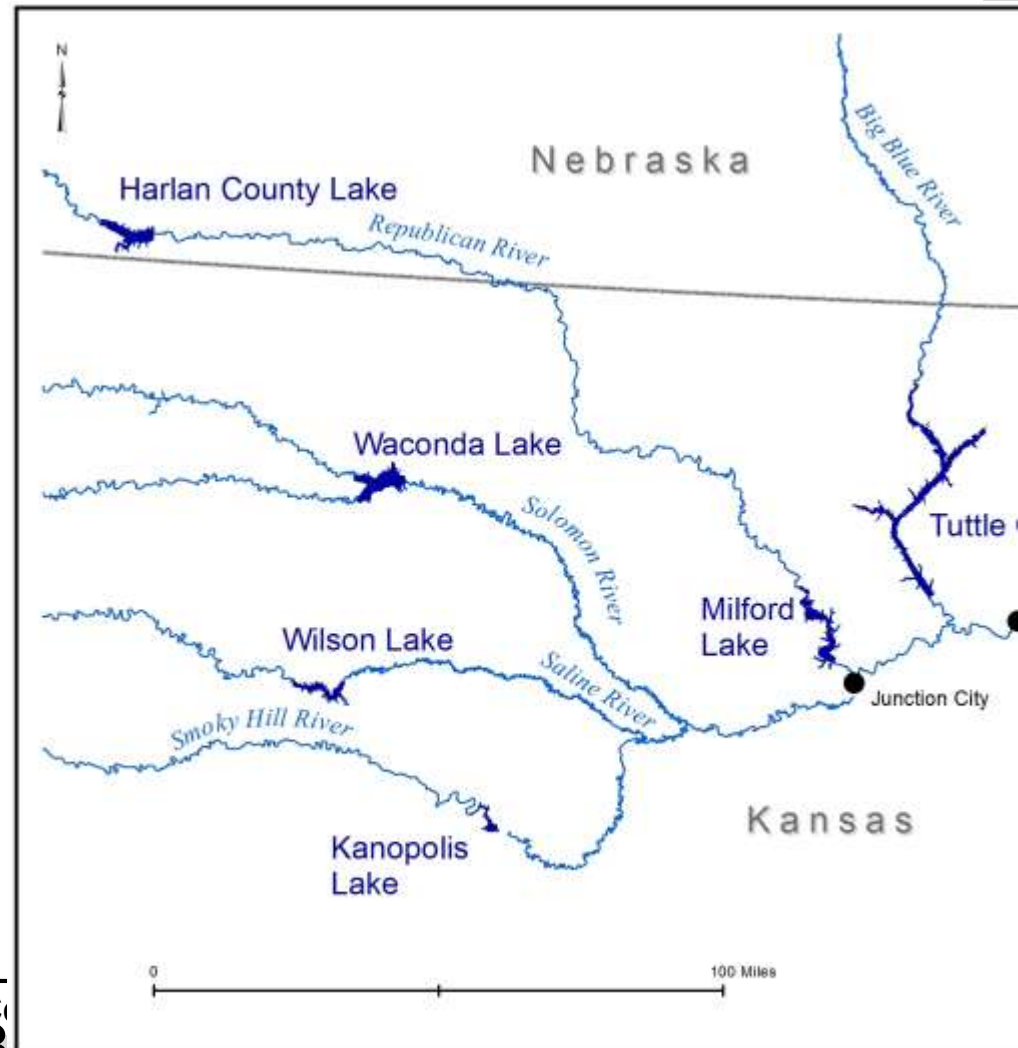

# Environmental Impacts: Kansas River

Pre-dam Sediment Load: 44 million tons per year

Post-dam Sediment Load: 13 million tons per year

A 70% reduction in sediment transport

ERDC/CHL CHETN-XIV-50

of Engineers

## Environmental Benefits of Restoring Sediment Continuity to the Kansas River

by John Shelley, Marvin Boyer, Jesse Granet, and Aaron Williams

**PURPOSE:** This Coastal and Hydraulics Engineering Technical Note (CHETN) summarizes the environmental benefits that could be gained by restoring sediment continuity from the Kansas River watershed to the Kansas River by passing sediment through, rather than trapping sediment in, large Federal reservoirs. The effort was conducted by the U.S. Army Engineer District, Kansas City (NWK), and supported by the U.S. Army Corps of Engineers (USACE).

# The dam-induced sediment deficit

The sediment deficit caused by the presence of the dams

**“The only way to sustainably manage the nation’s reservoirs is to pass the sediment downstream.”**

**-- Rollin Hotchkiss, Chair of the Corps Environmental Advisory Board,  
Speaking at the Kansas Water  
Conference**

**Outline**

**Why we all should care**

**Examples and Methods**

**Water Injection Dredging**

# Outline

**Why we all should care**

**Examples and Methods**

**Lake maintenance**

**Reservoir sustainability**

**Water Injection Dredging**

# Pressure Flushing

Credit: Gregory L. Morris

# Pressure Flushing

Photo: Gregory L. Morris

# Cherry Creek Flush

- Pressure flush to maintain operational capability at low level outlet
- Every year alternating high (1300 cfs) and low (250 cfs) flow

# Blue Springs Lake, KC Metro Area

<https://www.youtube.com/watch?v=qPKpueit7Qo>

US Army Corps of Engineers

# What about Kanopolis Lake?

- Pressure flushes ineffective
- Mechanical dredging
- Hydraulic dredging

# Outline

**Why we all should care**

**Examples and Methods**

**Lake maintenance**

**Reservoir sustainability**

**Water Injection Dredging**

# Array of Potential Solutions

- Sediment yield reduction
- Sediment bypass
- Sediment pass-through (routing, sluicing)
- Drawdown flushing
- Hydrosuction
- Inlet extension
- Density current venting
- Water-injection Dredging
- Dredging with land disposal
- Dredging with downstream recharge
- Pressure flushing
- Sediment focusing
- Dredging
- Reallocation
- New reservoirs/dam raises

Photo: Gregory L. Morris

# Reservoir Sediment Sustainability

Sediment-rich  
water

“What comes in, must go out!”

# Dredging with Land Disposal?

3,600 ac-ft/year into Tuttle's multi-purpose pool

At \$6.7/yd<sup>3</sup> = \$39 M/year +++

Not a long-term strategy

Cost increases as available disposal sites are filled

Does not address the sediment deficit downstream

**How to save 40% - 60% of total project cost:**

**Recharge the sediment downstream**

# Dredging with Downstream Discharge

## Example - Millsite Reservoir

# Dredging Example – Millsite Reservoir

# Dredging Example – Millsite Reservoir

# Reservoir Flushing Challenges

- Must have a low-elevation gate
- Uses ALL the water
- Will not usually flush out the “floodplain” i.e. maintained reservoir storage typically much less than the original
- Sediment-laded effluent – high concentration short duration

# Gebidim Dam Flushing

# **Drawdown flushing is for small (typically hydropower) reservoirs**

- **Spencer Dam was able to maintain 10% of its original storage by flushing twice a year for two weeks**
- **If agitation, water injection, or some other type of dredging were employed along with the flush, a larger pool could have been maintained.**

CRISIS

ADAPTATION  
SOLUTIONS

## OUR COASTAL CRISIS

### OUR COASTAL CRISIS

Land Loss

Wasted Sediment

Louisiana's coastline—including the incredibly valuable and productive Mississippi River Delta—is vanishing at an alarming rate. **Every 100 minutes, a football field of land disappears into the Gulf of Mexico.** This coastal land loss is a crisis of national importance, as it affects people, wildlife and jobs not only across the region but also throughout the United States.

To fully grasp the scope and urgency of Louisiana's coastal crisis, it is important to understand how the M

### Dams Upriver

Valuable land-building sediment is trapped behind locks and dams on the Missouri, Mississippi and Ohio Rivers. Since 1850, the amount of sediment in the Lower Mississippi River has decreased by more than **70 percent**.
