

Long-Term Water-Quality Constituent Concentrations, Loads, & Trends in the Little Arkansas River, South-Central Kansas, 1995–2021

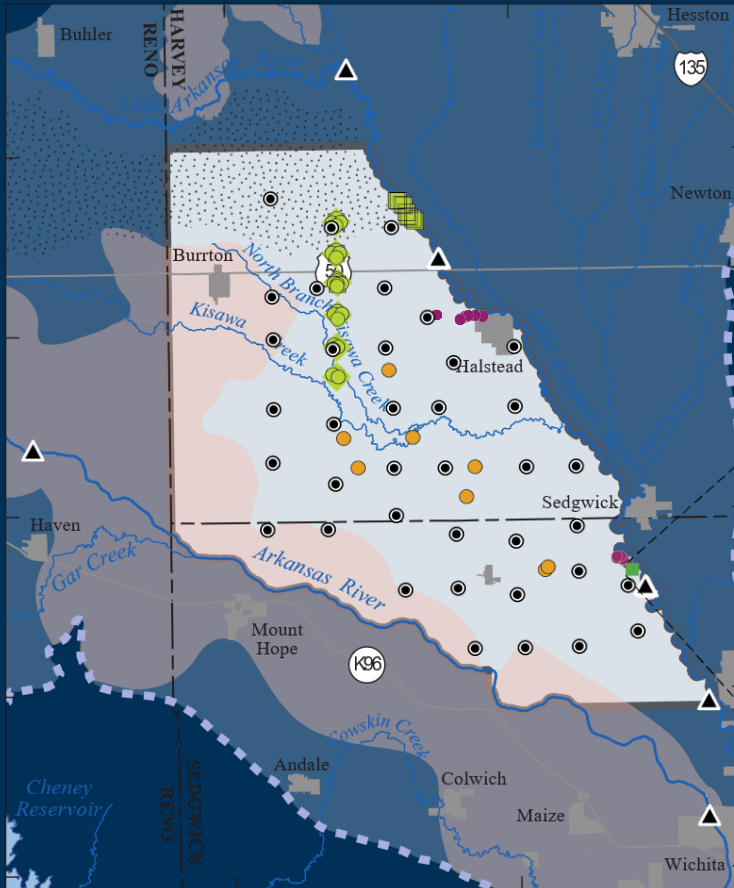

Prepared in cooperation with the city of Wichita

U.S. Department of the Interior
U.S. Geological Survey

M.L. Stone & B.J. Klager
Governor's Conference on the Future of Water in Kansas
November 17, 2022

Study Area & Project Background: *Equus* Beds Aquifer ASR

Equus Beds aquifer ASR project history & sites.

Study Area & Project Background: Previous Study Highlights

Equus Beds aquifer ASR schematic (Ziegler and others, 2010).

- **Aquifer chloride plume moving about 1 ft/d**
 - Klager & others (2014)
- **Aquifer nitrate, chloride, & arsenic concentrations commonly exceed criteria**
 - Ziegler & others (2010)
 - Tappa & others (2015)
 - Stone & others (2019)
- **ASR Phase II activity study showed that changes in aquifer & river water quality largely governed by hydrology & were not persistent**
 - Stone & others (2016)
- **Long-term continuous water-quality dataset**
 - Surface- & groundwater monitoring
 - 1998-present (2022)
- **Surrogate relations for water-quality constituents of interest**
 - Stone and Klager (2022)
 - Available at the National Real-Time Water Quality Network: nrtwq.usgs.gov

Current Study Efforts: Purpose & Objectives

- Quantify and characterize Little Arkansas River water quality
- Develop additional surrogate relations for water-quality constituents of interest
- Compute continuous concentrations & loads for water-quality constituents of interest
- Compare computed water-quality concentrations to relevant criteria
- Evaluate long-term water-quality trends

Little Arkansas River & ASR Phase II intake structure near Upstream ASR site.

Study Area & Sites: Little Arkansas River Watershed

- Agricultural land use
- TMDLs
 - nutrients
 - sediment
 - fecal coliform bacteria
 - total suspended solids
 - total phosphorus
 - atrazine
- Little Ark R. study sites
 - Nr Halstead “Hwy 50” (07143672)
 - “Upstream ASR” Fac (375350097262800)
 - Nr “Sedgwick” (07144100)

Location of study sites, watersheds, and land use.

Data Collection: Little Arkansas River, 1995-2021

- **Continuous streamflow (since 1993)**
- **Continuous water quality (since 1998)**
 - Water temperature
 - pH
 - Specific conductance
 - Dissolved oxygen
 - Turbidity
 - fDOM
 - Nitrate plus nitrite
- **Discrete water quality (since 1995)**
 - Primary ions
 - Nutrient & carbon species
 - Sediment
 - Pesticides
- **Data available at the USGS National Water Information System (NWIS) database: waterdata.usgs.gov/nwis**

Prepared in cooperation with the city of Wichita, Kansas

Protocols for Collection of Streamflow, Water-Quality, Streambed-Sediment, Periphyton, Macroinvertebrate, Fish, and Habitat Data to Describe Stream Quality for the Hydrobiological Monitoring Program, Equus Beds Aquifer Storage and Recovery Program, City of Wichita, Kansas

Open-File Report 2012-1055

U.S. Department of the Interior
U.S. Geological Survey

Stone & others (2012)

Data Analysis: Little Arkansas River Surrogate Models

- Relation between continuous & discrete data
- Data available at National Real-Time Water Quality
<https://nrtwq.usgs.gov/ks/>
- Stone & Klager (2022)
 - Ions
 - Nutrients & carbon
 - Sediment
 - Bacteria
- New & updated models
 - Bromide
 - Atrazine
- Long-term computed concentrations & loads

In-situ water quality monitor & sampling.

Data Analysis: Little Arkansas River Trends, 1995-2021

- EGRET (Exploration & Graphics of RivEr Trends)
- WRTDS (Weighted Regressions on Time, Discharge, & Season)
- WBT (WRTDS Bootstrap Test; Hirsch and others, 2015)

Assigns trend likelihood & descriptors:

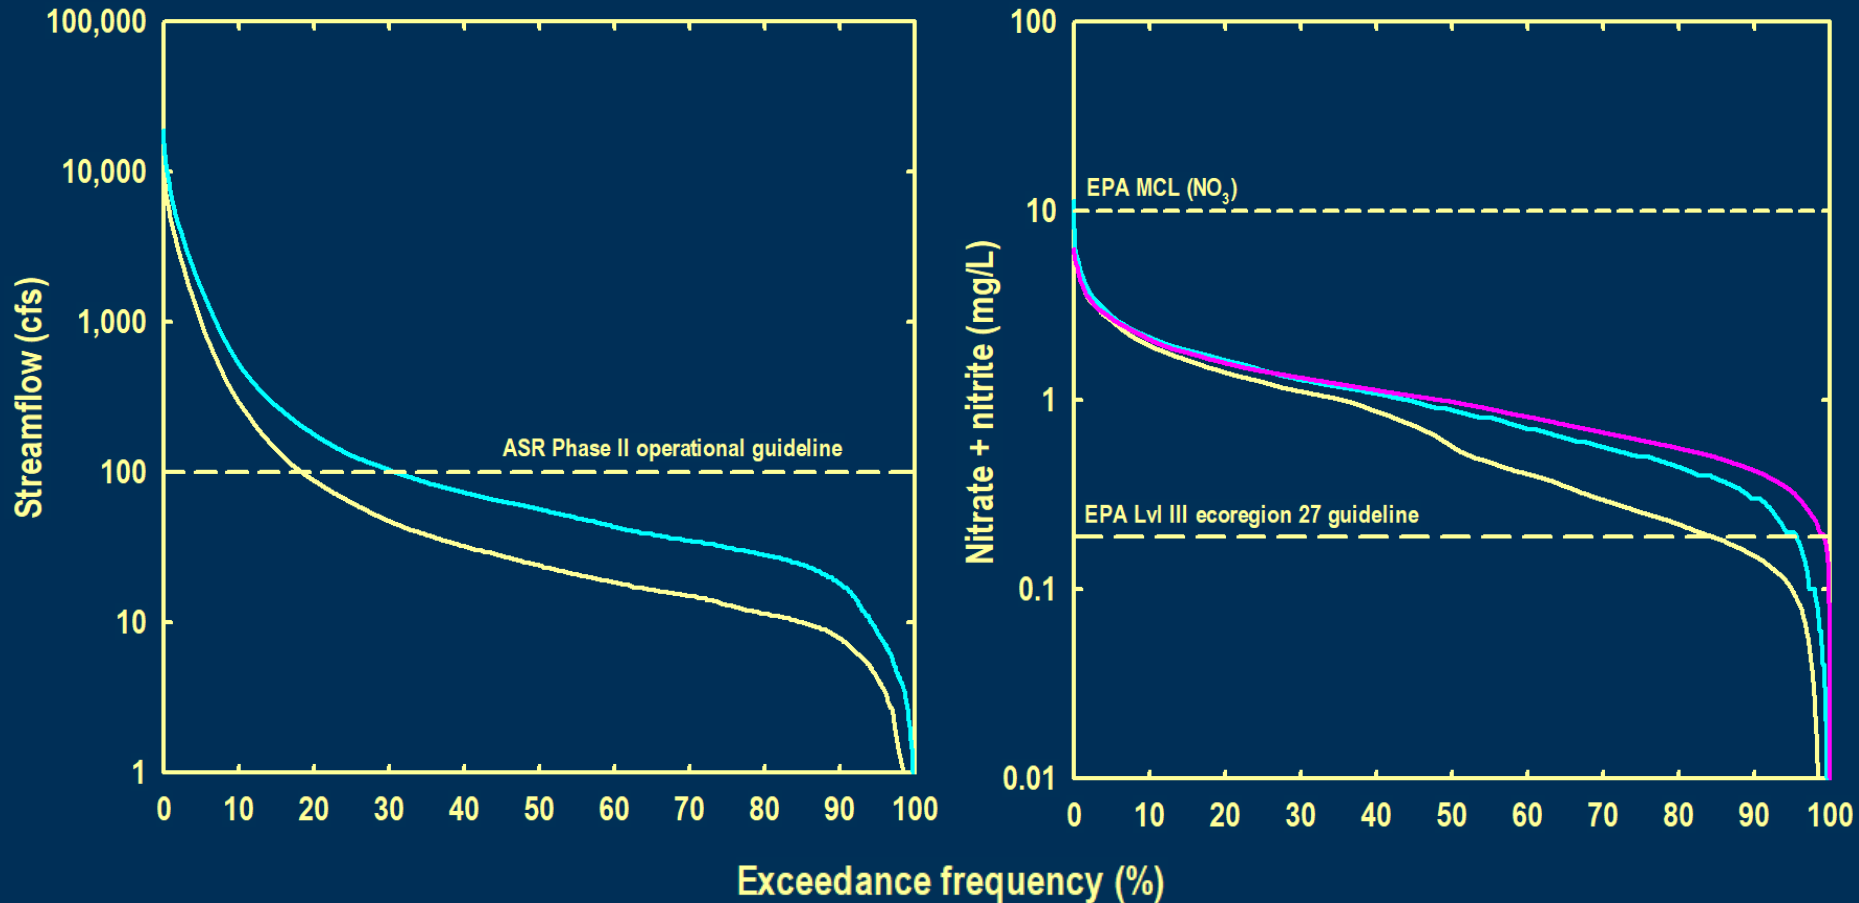

Trend probability	Upward trend descriptors	Downward trend descriptors
≥ 0.95 and ≤ 1.0	Highly likely	Highly unlikely
≥ 0.90 and < 0.95	Very likely	Very unlikely
≥ 0.66 and < 0.90	Likely	Unlikely
> 0.33 and < 0.66	About as likely as not	About as likely as not
> 0.1 and ≤ 0.33	Unlikely	Likely
> 0.05 and ≤ 0.1	Very unlikely	Very likely
≥ 0 and ≤ 0.05	Highly unlikely	Highly likely

Hirsch & others (2015)

Hirsch & De Cicco (2015)

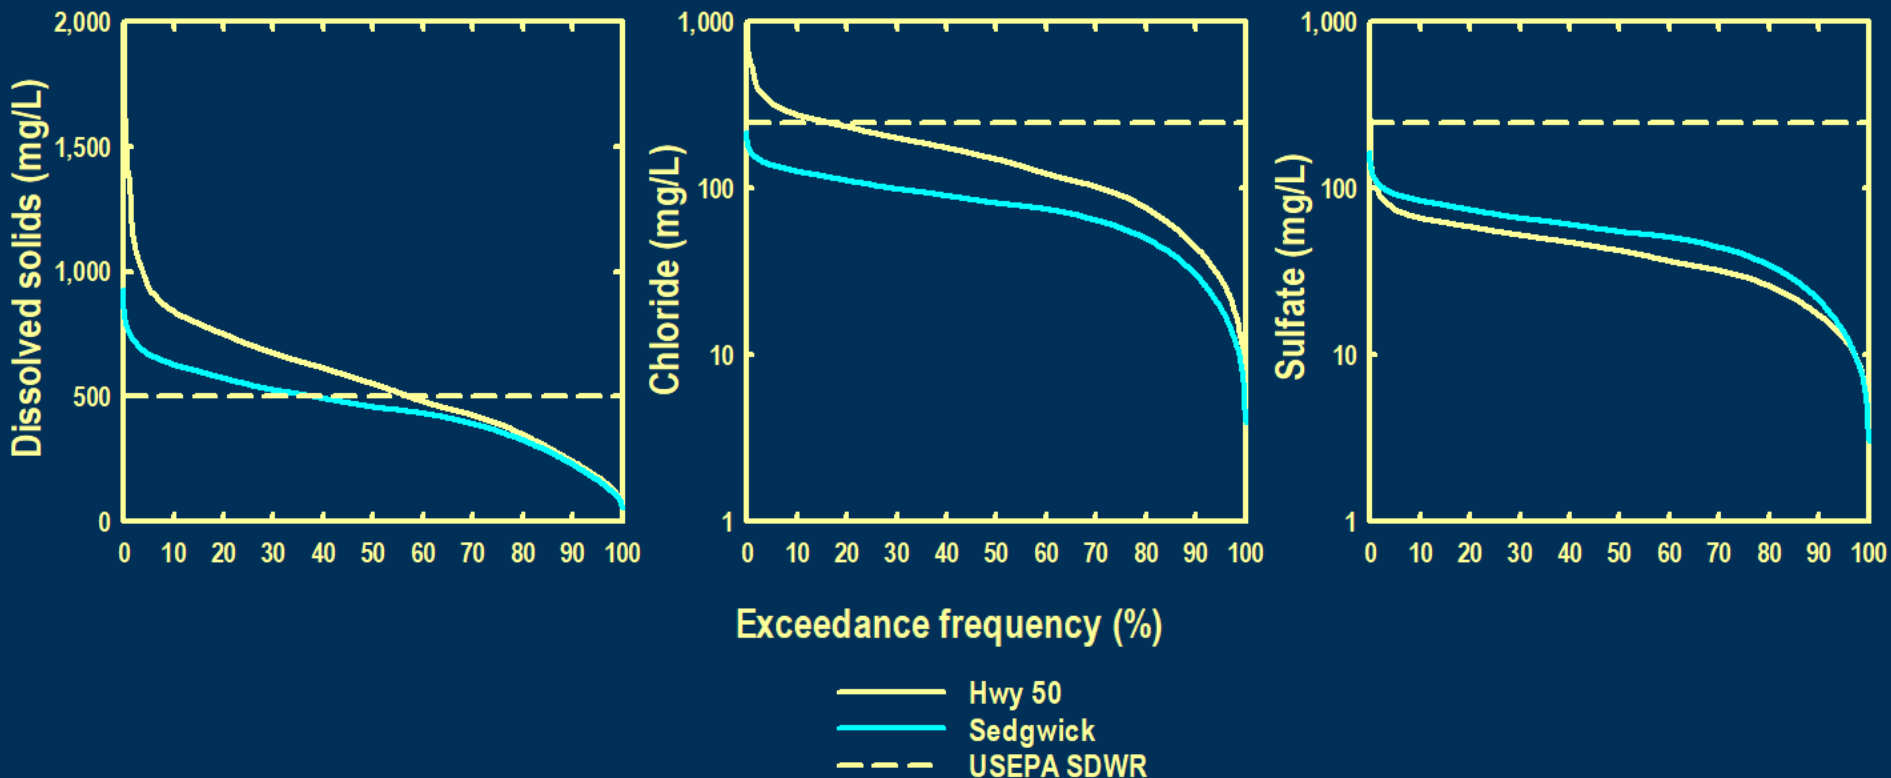

Results: Little Arkansas River Continuous Streamflow (1995-2021) & Nitrate (2012-2021)

- Hwy 50
- Upstream ASR
- Sedgwick

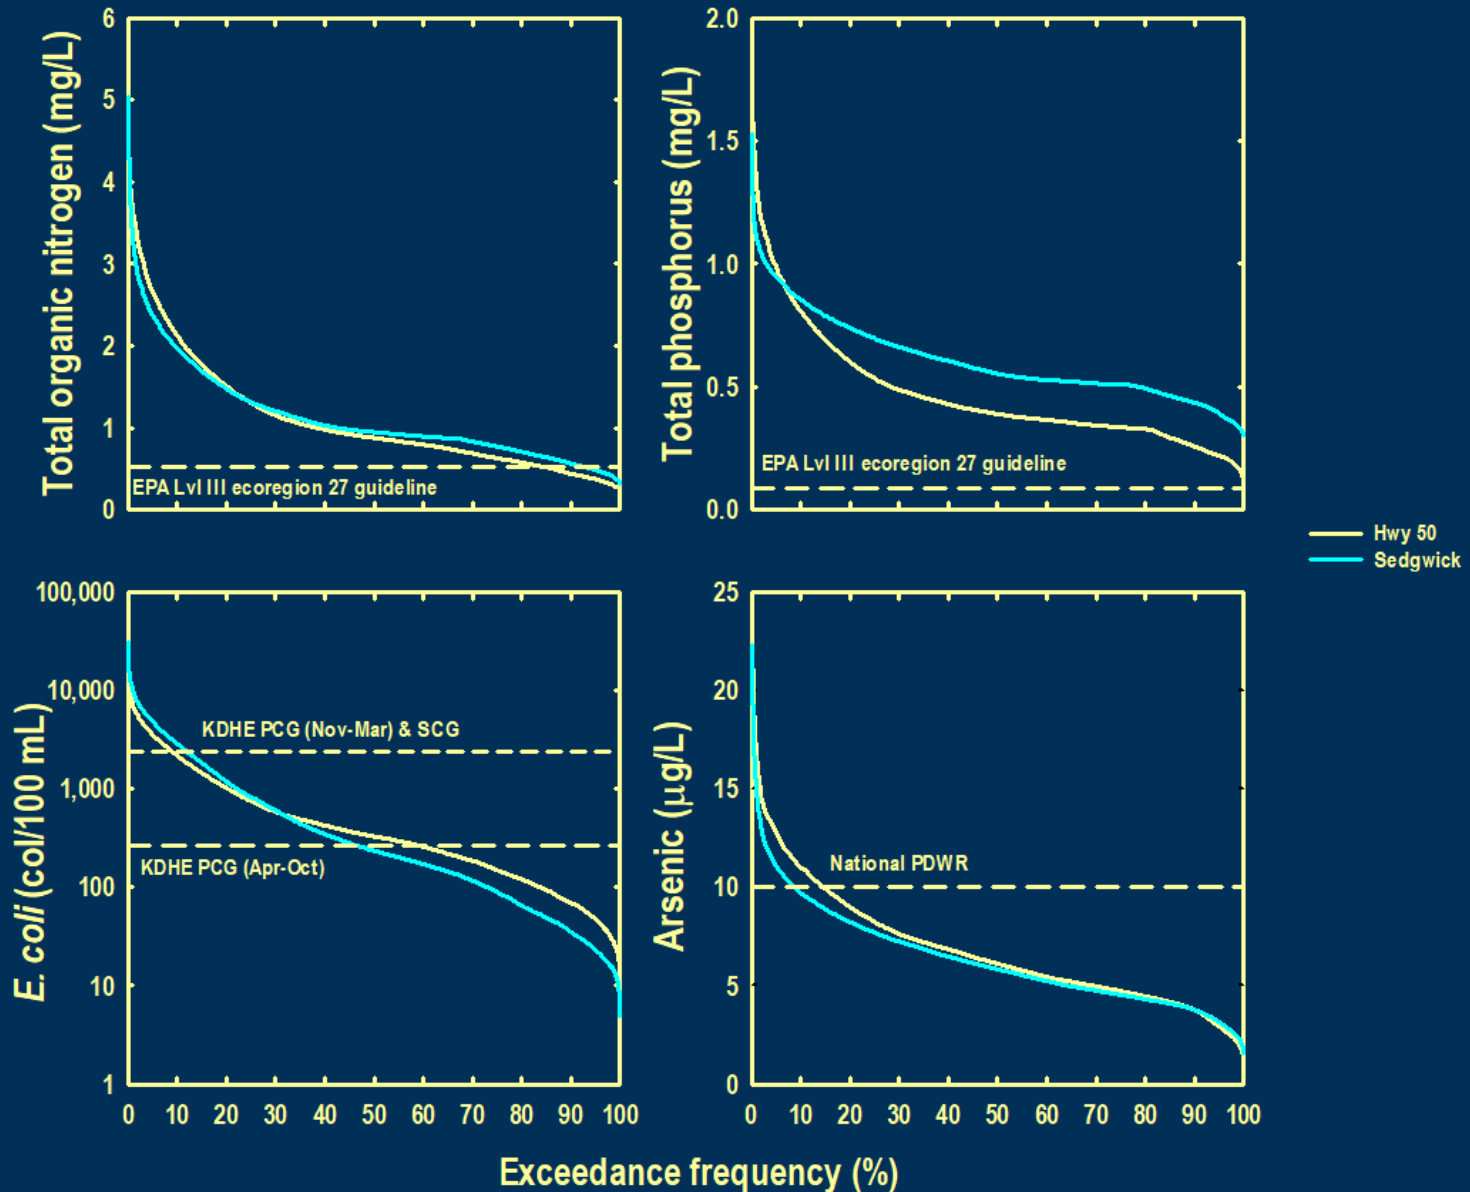

This information is preliminary and is subject to revision. It is being provided to meet the need for timely best science. This information is not for distribution.

Results: Little Arkansas River Continuously Computed Ions 1998-2021

This information is preliminary and is subject to revision. It is being provided to meet the need for timely best science. The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information. This information is not for distribution.

Results: Little Arkansas River Continuously Computed Nutrients, Bacteria, & Arsenic 1998-2021

This information is preliminary and is subject to revision. It is being provided to meet the need for timely best science. The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information. This information is not for distribution.

Results: Little Arkansas River Continuously Computed Bromide

The data used to produce this plot are provisional and have not been reviewed or edited. They may be subject to change.

Computed instantaneous bromide concentration in Little Arkansas River near Sedgwick, KS

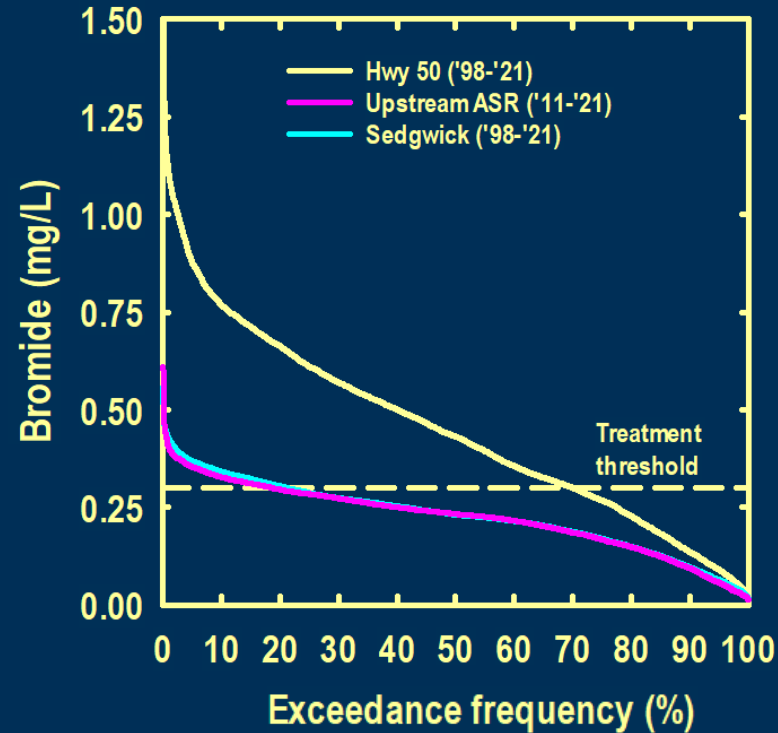

Data pulled 06-30-22 16:27.

The chart is interactive: you can mouse over to highlight individual values. You can click and drag to zoom. Double-clicking will zoom you back out. Shift-drag will pan.

EXPLANATION

- Discharge
- Measured or computed water-quality constituent
- █ 90-percent prediction interval for computed value
- Value obtained from discrete sampling and analysis

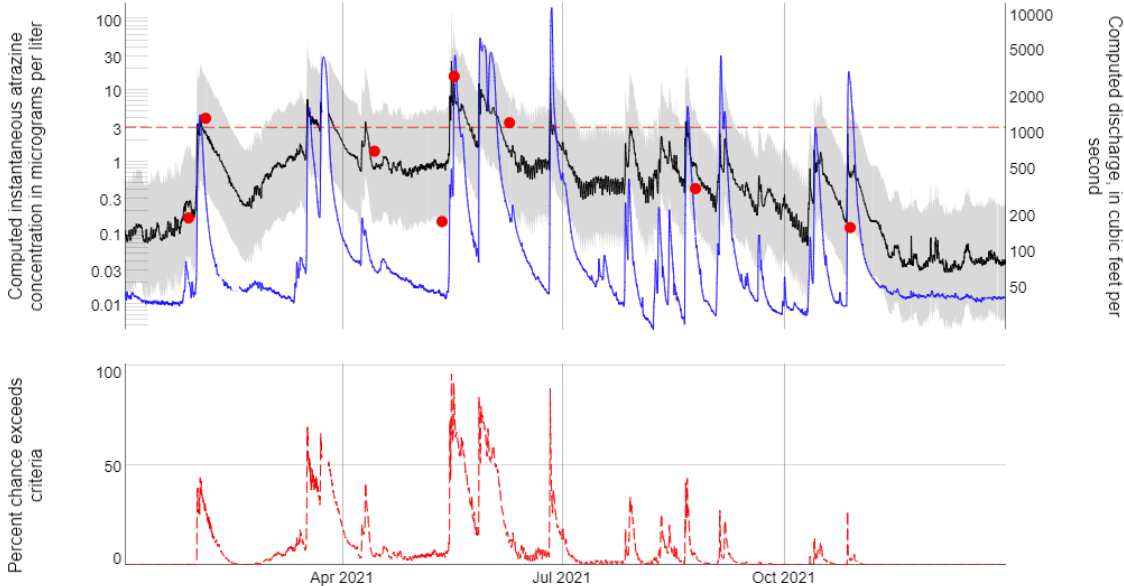

This information is preliminary and is subject to revision. It is being provided to meet the need for timely best science. The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information. This information is not for distribution.

Results: Little Arkansas River Continuously Computed Atrazine

The data used to produce this plot are provisional and have not been reviewed or edited. They may be subject to change.

Computed instantaneous atrazine concentration in Little Arkansas River near Sedgwick, KS

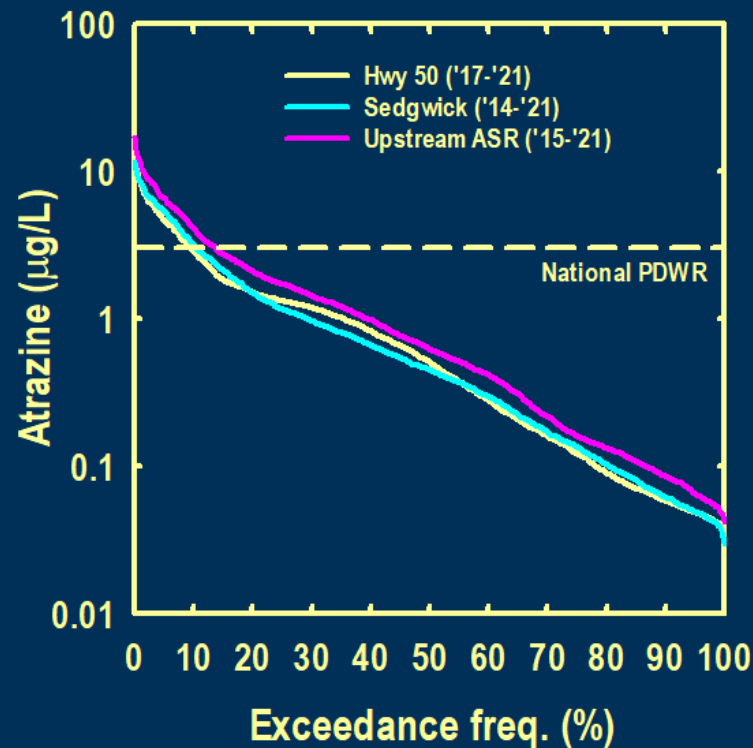

Data pulled 06-30-22 16:27.

The chart is interactive: you can mouse over to highlight individual values. You can click and drag to zoom. Double-clicking will zoom you back out. Shift-drag will pan.

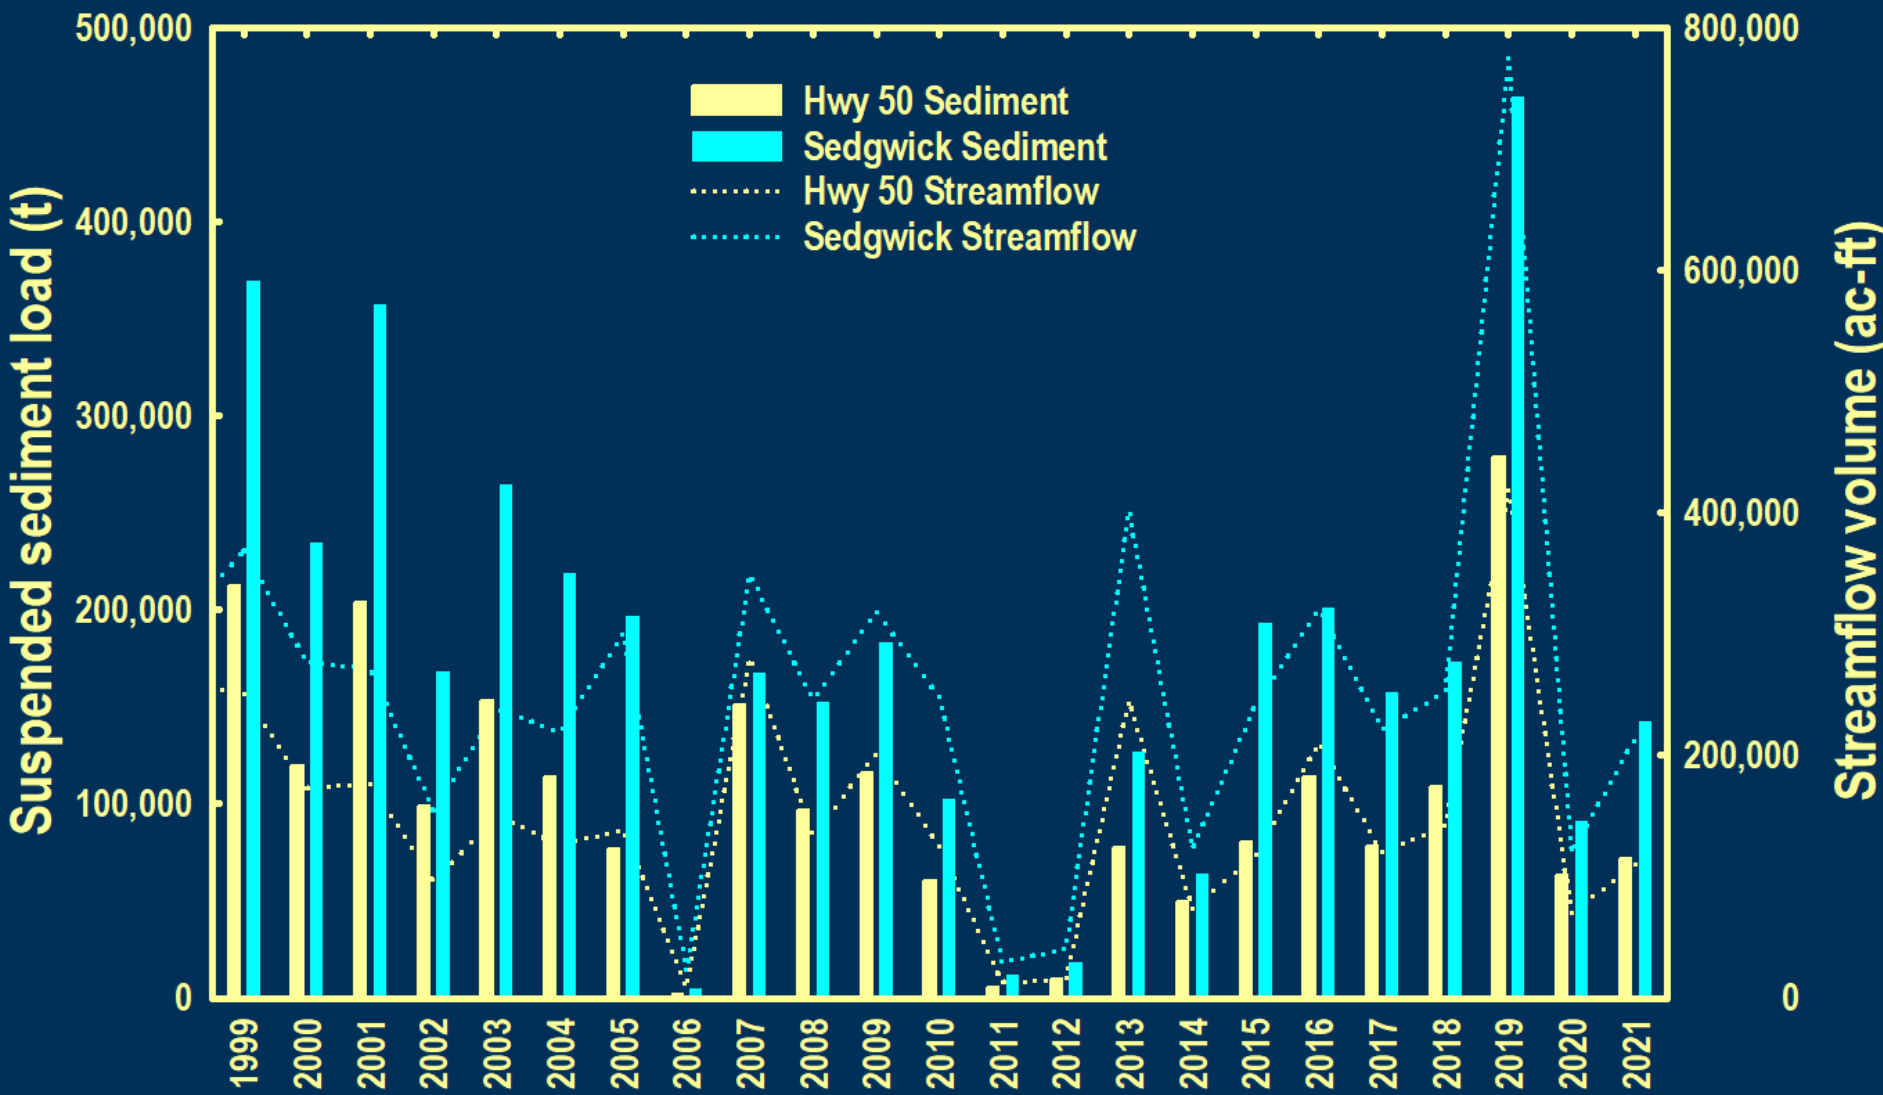

EXPLANATION

- Discharge
- Measured or computed water-quality constituent
- 90-percent prediction interval for computed value
- Value obtained from discrete sampling and analysis
- Load calculated using laboratory analysis and discharge
- ⋯ Water-quality criteria

This information is preliminary and is subject to revision. It is being provided to meet the need for timely best science. The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information. This information is not for distribution.

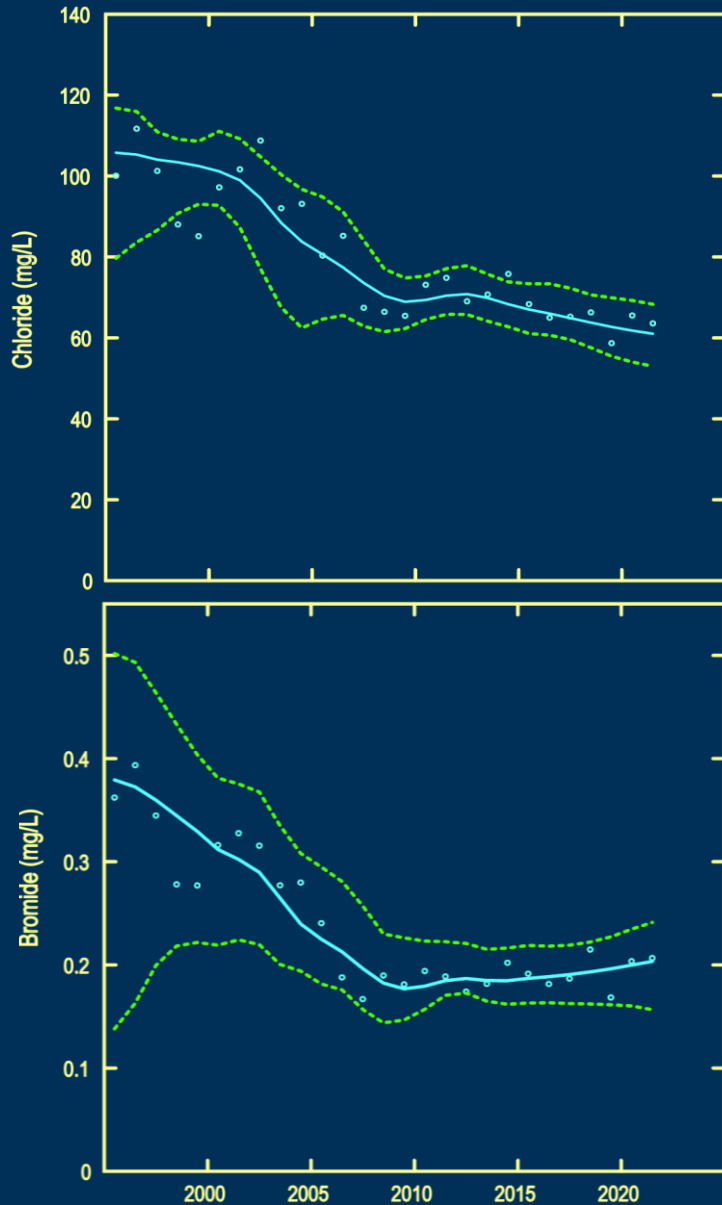

Results: Little Arkansas River Suspended Sediment Concentration Load

This information is preliminary and is subject to revision. It is being provided to meet the need for timely best science. The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information. This information is not for distribution.

Results: Little Arkansas River (Sedgwick) Long-Term Trends

Chloride:

Frequency that flow-normalized concentration is trending down in bootstrap replicates: 0.98

downward trend highly likely

1995 flow-normalized: 106 mg/L

2021 flow-normalized: 61 mg/L

Trend magnitude: 43% decrease

Bromide:

Frequency that flow-normalized concentration is trending down in bootstrap replicates: 0.77

downward trend likely

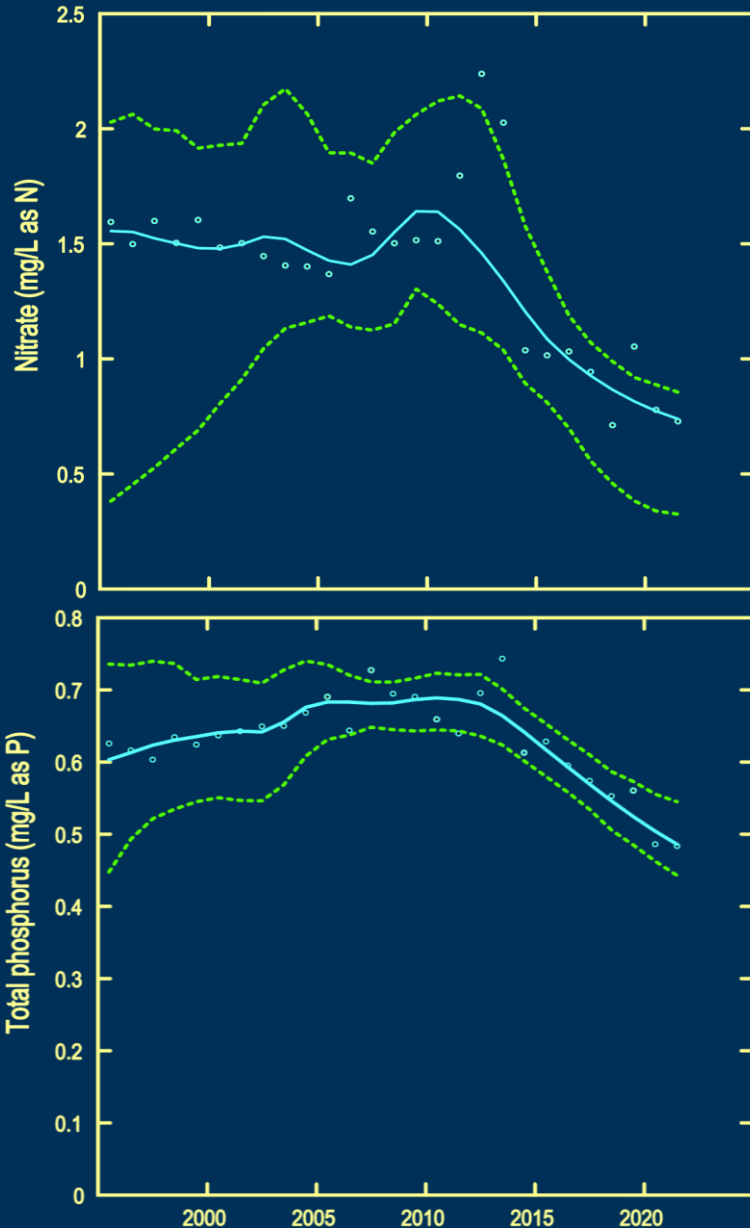

1995 flow-normalized: 0.38 mg/L

2021 flow-normalized: 0.20 mg/L

Trend magnitude: 45% decrease

This information is preliminary and is subject to revision. It is being provided to meet the need for timely best science. The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information. This information is not for distribution.

Results: Little Arkansas River (Sedgwick) Long-Term Trends

Nitrate:

Frequency that flow-normalized concentration is trending down in bootstrap replicates: 0.82

downward trend likely

1995 flow-normalized: 1.6 mg/L

2021 flow-normalized: 0.74 mg/L

Trend magnitude: 52% decrease

Total Phosphorus:

Frequency that flow-normalized concentration is trending down in bootstrap replicates: 0.81

downward trend likely

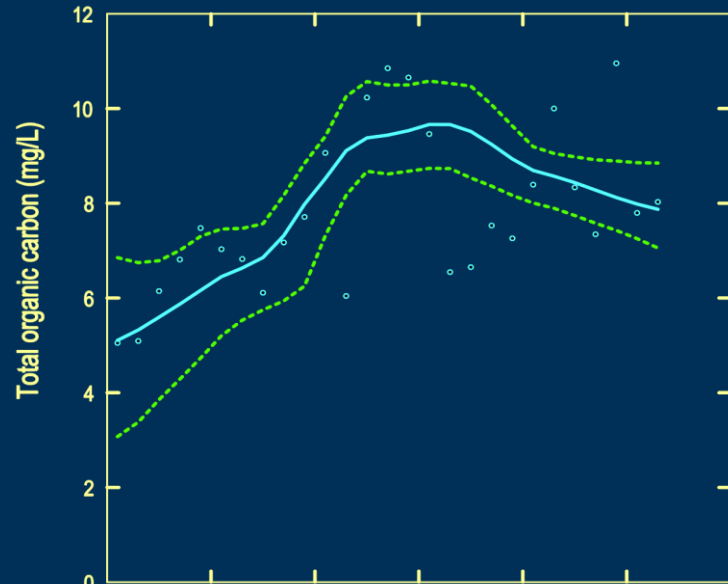

1995 flow-normalized: 0.38 mg/L

2021 flow-normalized: 0.20 mg/L

Trend magnitude: 20% decrease

This information is preliminary and is subject to revision. It is being provided to meet the need for timely best science. The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information. This information is not for distribution.

Results: Little Arkansas River (Sedgwick) Long-Term Trends

Total organic carbon:

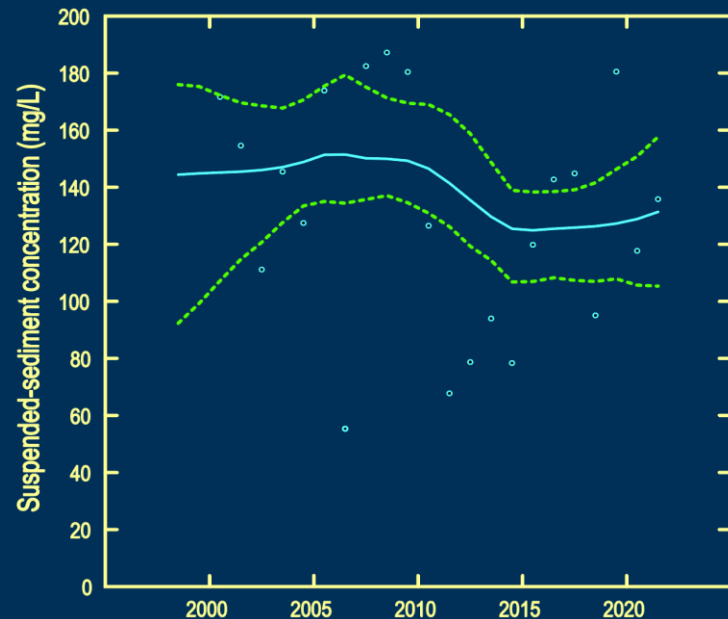

Frequency that flow-normalized concentration is trending up in bootstrap replicates: 0.99

upward trend is highly likely

1995 flow-normalized: 5.1 mg/L

2021 flow-normalized: 7.9 mg/L

Trend magnitude: 52% increase

Suspended sediment:

Frequency that flow-normalized concentration is trending down in bootstrap replicates: 0.53

downward trend is about as likely as not

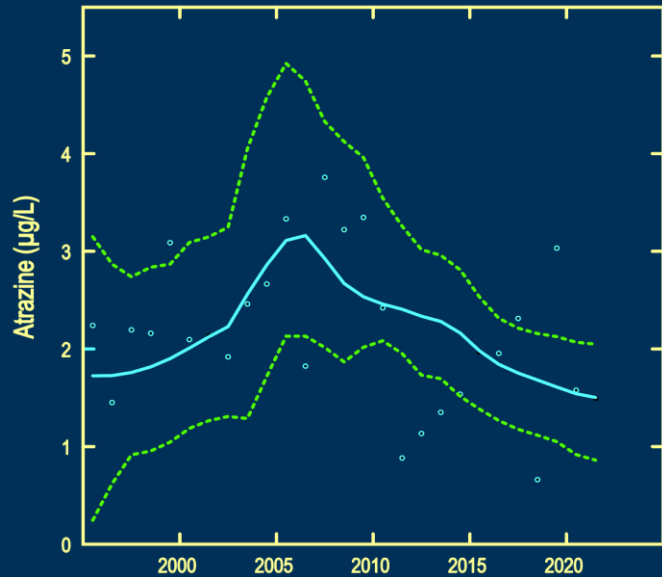

1998 flow-normalized: 144 mg/L

2021 flow-normalized: 131 mg/L

Trend magnitude: 7% decrease

This information is preliminary and is subject to revision. It is being provided to meet the need for timely best science. The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information. This information is not for distribution.

Results: Little Arkansas River (Sedgwick) Long-Term Trends

Atrazine:

Frequency that flow-normalized concentration is trending down in bootstrap replicates: 0.72

downward trend is likely

1995 flow-normalized: 1.7 mg/L

2021 flow-normalized: 1.5 mg/L

Trend magnitude: 13% decrease

Tracking Water Quality in U.S. Streams and Rivers

USGS National Water Quality Network Data, Water-Quality Loads, and Trends

The USGS National Water Quality Network (NWQN) consists of 110 stream and river sites with long-term, consistent information on streamflow and water-quality conditions. Data are collected to assess the status and trends of water-quality conditions at large inland and coastal river sites, as well as in small streams indicative of urban, agricultural, and reference conditions. These data can be useful to local, regional, or national-scale studies related to multiple topics, including drinking water-quality, chemical fate and transport, and harmful algal blooms. In addition to site-specific information provided through the map below or the [NWQN site list](#), additional pages are provided that display maps of water-quality trends at a national scale, quantify water-quality loading to the Gulf of Mexico in support of goals of the [Mississippi River/Gulf of Mexico Hypoxia Task Force](#), and display trends in water-quality in the Delaware River Basin. This website provides details on NWQN operations, access to data collected at NWQN sites, and graphs that display how water-quality conditions are changing through time. In addition to the 110 sites funded through the NWQN, this webpage also hosts information on water-quality conditions at 36 sites with sufficient data operated by USGS Water Science Centers through [Cooperative Matching Funds](#). More information on network objectives, data collection and reporting methods, and sites can be accessed via links below. Input on NWQN site, data, and on how data are presented on this Web site helps us improve NWQN operations and data presentation. Please take a few minutes to [provide information](#) on how you are using NWQN data and suggestions for improving the network and Web site.

Preliminary Conclusions: Little Arkansas River Long-Term Data Collection, 1995-2021

- **Specific conductance best predicted primary ions, including chloride & bromide**
- **Turbidity best predicted unfiltered nutrients, carbon, sediment, & pesticides**
- **Chloride, bromide, nitrate, total phosphorus, & atrazine concentrations had downward trends**
- **Total organic carbon concentrations had an upward trend**
- **Sediment concentrations exhibited no trend**
- **Continuous monitoring measures changing conditions over time & provides critical information**
- **Future research efforts include analysis for pesticide trends & during targeted flow conditions to assess drivers**
